

CockroachDB Workshop 2022

Build a RESTful API with CockroachDB
Serverless and Python

What You'll Learn

- setting up and using CockroachDB serverless
- importing data into a database
- using ORMs and SQL to interact with a database
- setting up and managing a Python developer environment
- using libraries to connect to and interact with a database
- learning what RESTful APIs are and how to make them
- working with JSON data

What You'll Need

- basic programming skills (functions, variables, objects)
- a web browser (no ide or local development required!)
- familiarity with SQL and APIs

Tech Stack

Python

Replit

Flask

Psycopg

PonyORM

CockroachDB Serverless

Agenda

1. Intro and Setup [5 mins]
2. Using SQL [10 mins]
3. Importing Data [5 mins]
4. ORMs (Skipping) [10 mins]
5. Intro to REST APIs [5 mins]
6. Building a REST API [15 mins]

Hello!

I'm Aydrian

Developer Advocate at Cockroach Labs

I'm a Hoosier living in the big city (New York).

I enjoy mentoring at hackathons and live coding on Twitch. I'm a corgi dad to Atticus. My interests include movies, theatre, attending sci-fi/comic conventions, and some light cosplay.

[twitter, instagram, twitch] @itsaydrian

Hello!

I'm Jayant (aka Jay)

Member of Technical Staff at Cockroach Labs (swe)

I graduated from ECE in April and moved to New York in July. I grew up in Markham, ON.

I spend my free time playing Valorant, playing music on the piano/guitar, and hunting for new fun things to do in the city.

You can find my socials at jayantshrivastava.com

What are APIs?

Important Resources

Source Code: <https://cockroa.ch/hthtn2022-notesn22-workshop-code>

Complete Workshop Guide: <https://cockroa.ch/htn22-workshop-guide>

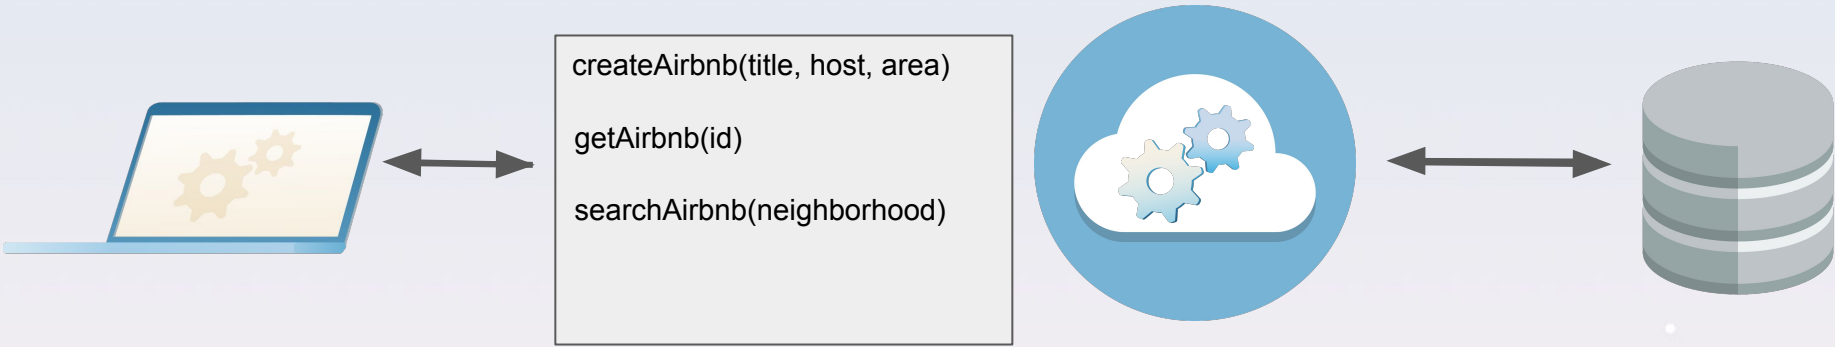

Client

Server
(Replit)

Database

API: Application Programming Interface

URL: Universal Resource Locator

GET
HEAD

retrieve information
retrieve resource headers

POST

submit data to the server.

PUT

save an object at the location

DELETE

delete the object at the location

`https://my-domain.api.com`

<code>/airbnbs/<id></code>	<code>[GET]</code>
<code>/airbnbs/<id></code>	<code>[DEL]</code>
<code>/airbnbs?author=<name></code>	<code>[GET]</code>
<code>/airbnbs?maxPages=<num></code>	

HTTP: Hypertext Transfer Protocol

src:
<https://medium.com/maverick-labs/a-quick-overview-of-http-methods-51098b1300bd>

Method	GET	POST	PUT	PATCH	DELETE	OPTIONS
Successful Response Has Body	Yes	Yes	No	Yes	Possible	Yes
Request Allowed To Have Body * Not Required	No	Yes	Yes	Yes	Yes*	No
Safe	Yes	No	No	No	No	Yes
Idempotent	Yes	No	Yes	No	Yes	Yes

src:

<https://levelup.gitconnected.com/the-simple-six-http-methods-eli15-edition-53f336b1ebd>

1. Informational responses (100 – 199)
2. Successful responses (200 – 299)
3. Redirects (300 – 399)
4. Client errors (400 – 499)
5. Server errors (500 – 599)

REST: Representational State Transfer

- uniform interface
- stateless
- cacheable
- client-server
- layered system
- code on demand

Time to Code!

Thank you!
